Engineered solidwood flooring is a product made of core pine/hevea and solidwood lamella that is glued on the top surface of the core. It is available in almost any solidwood species. The product thus has the natural

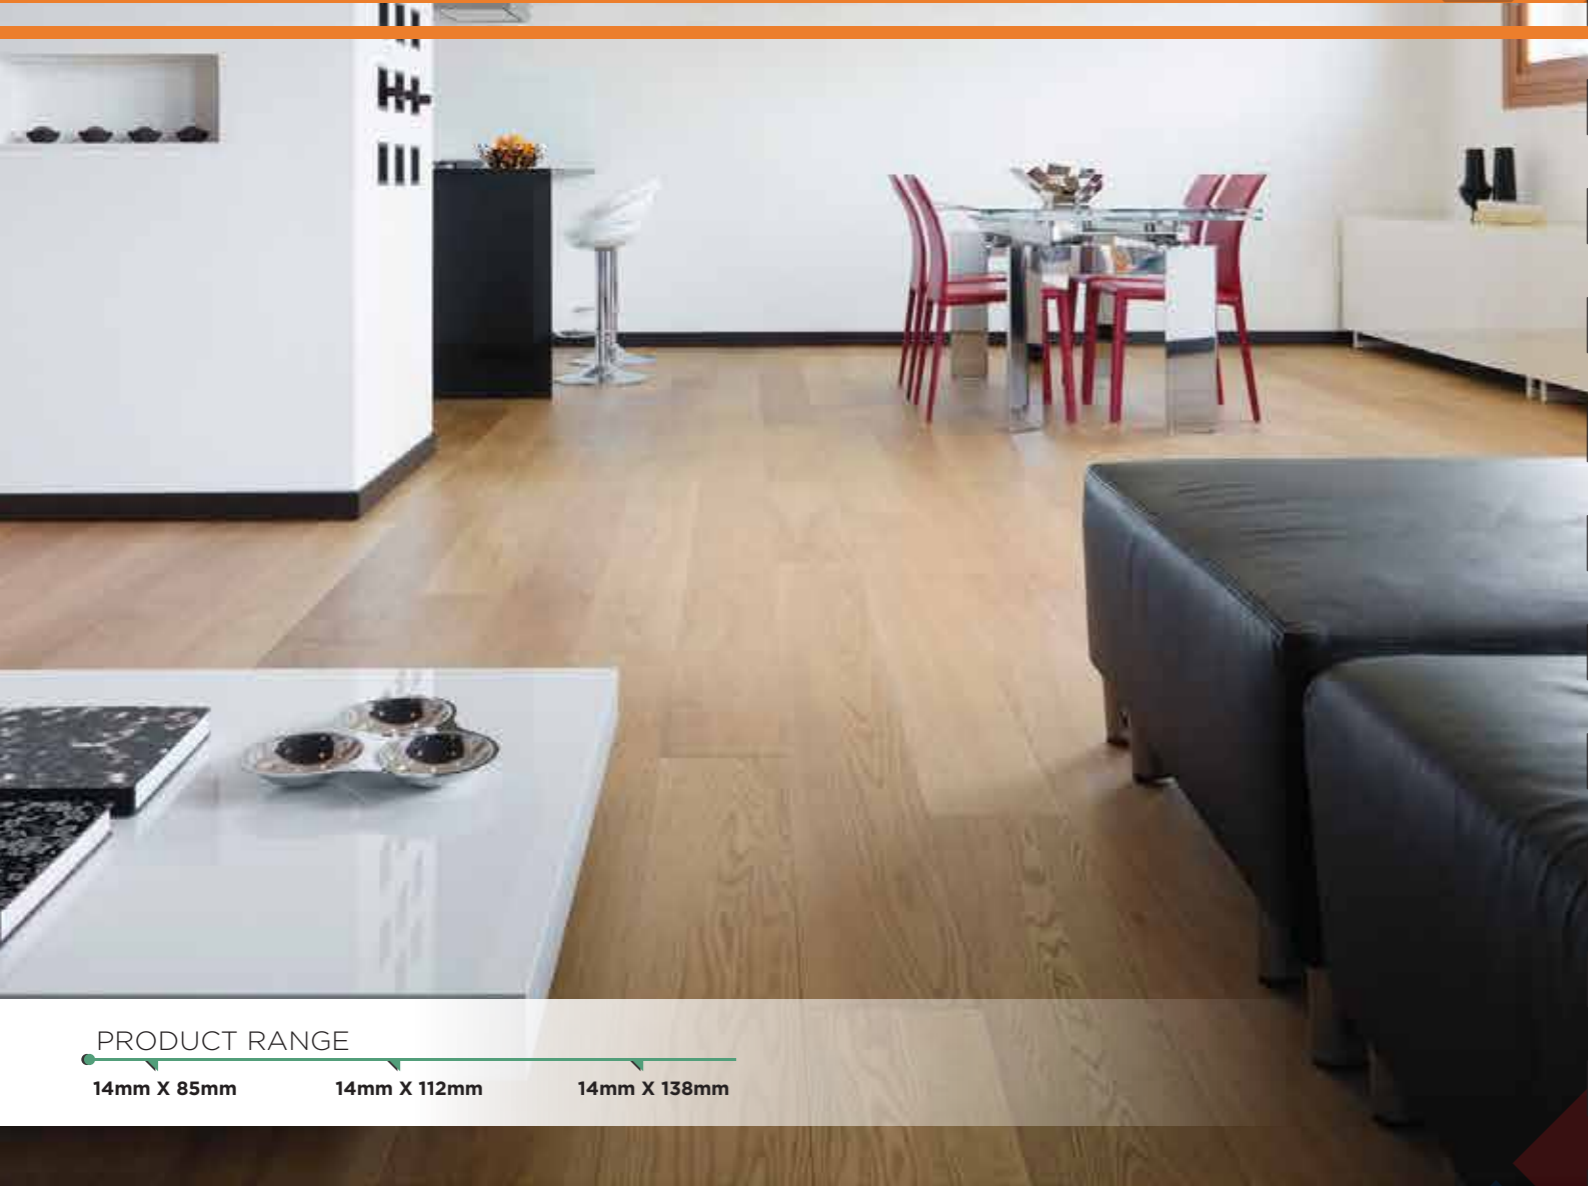

characteristics of the selected wood species as opposed to a photographic layer. The "engineered" product has been designed to provide greater stability, particularly concerning moisture or heat.

*Product images are for illustrative purpose only. Wood is a product of nature which will display natural characteristics and variances in grain and color.
